

Killick announces worldwide Distribution agreement for Learjet 60 Parts

Killick Aerospace to become Bombardier's distributor of Learjet 60 parts to meet needs of MROs and Operators in the global aviation marketplace

DUBLIN, October 15, 2019

Killick Aerospace has been selected by Bombardier to become the exclusive worldwide distributor for spare parts and materials that are unique to Learjet 60 aircraft. Additionally, Killick Aerospace has been selected as an authorized non-exclusive distributor of spare parts common between Learjet 60 aircraft and other platforms.

"We are excited by this collaboration and look forward to utilizing our worldwide sales and distribution network to provide Learjet 60 operators and MROs with timely access to the Bombardier parts and materials they need to ensure that their aircraft continue to fly and operate globally for years to come," said Steve Donegan, Managing Director, Killick Aerospace.

Killick Aerospace will support this program from distribution centers in the USA, Ireland and Singapore.

Through the integrated collaboration between Killick Aerospace and Bombardier, Killick Aerospace will provide material forecasting and advanced provisioning to ensure the continuation of world-class support for Learjet 60 operators and MROs.

Bombardier encourages Learjet 60 aircraft customers to take advantage of the services being offered directly by Killick Aerospace for spare parts and materials. All Smart Services customers and operators using Bombardier Service Centres, line maintenance stations and Mobile Response Teams will continue to receive these services from Bombardier.

This new program complements the recent appointment of Killick Aerospace by Bombardier as distributor for Challenger 600 & 601 spare parts.

The Killick Aerospace Group of companies - Killick Aerospace, Turbine Engine Specialists and AviStox, are leaders in providing aviation parts and materials as well as engines and MRO services to aircraft operators and maintenance providers globally from offices and facilities in the USA, Europe and Asia.
